

Komax advanced delivery systems

A synonym for increased productivity

Marc Huber Product Manager

With the new lineup of advanced wire delivery systems from Komax, you get more performance for less money. We take a no compromise approach to matching these units to the speeds and wire properties of our Kappa products. In other words, we are your one-stop shop for solutions designed to make you even more successful.

YOUR BENEFITS

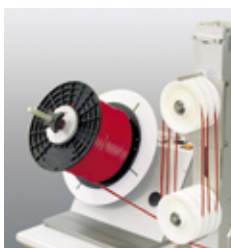

- > More performance at fair prices
- > Gentle, continuous and fast wire feed
- > Comfortable reel change, quick wire thread-in and thread-out
- > One system – one supplier
- > No operator required during production

If you compare a wire delivery system with manual feed, you quickly realize the benefits of the former. It frees the operator up to perform other tasks during production instead of the often arduous job of feeding in the wire.

The advanced delivery systems (ads) feed a broad range of wires (0.02mm² - 95mm²) smoothly and quickly. Reels weighing up to 600kg and with diameters up to 1000mm can be fed effortlessly. Various set-up functions allow easy reel changes and quick thread-in and thread-out of the wire. All drives are rated for heavy-duty performance and operate with absolute minimal vibration and noise.
