

Cutting-edge solutions in wire processing

The Productronica trade fair in November 2005 was certainly worth a visit as far as we here at Komax and our customers were concerned. Komax presented a number of new products at this major event in Munich, all of which were well received.

The rapid pace of technological advancement, increasing pressure on costs and small batch sizes are forcing the wire processing industry to look for cost-efficient and flexible production methods. High precision and process security, short conversion times as well as the networking of production facilities are the key success factors here. In order to satisfy these various market requirements, Komax displayed a number of new and innovative products at Productronica.

One of these was the new Alpha 355 fully automatic crimping machine – the second in the production series – which is equipped with new platforms. The bt 752, a new generation stripper, sealer and crimper, was also launched. In addition, Komax took a look at the latest developments in wire harness production and offered an insight into fascinating wire processing systems.

Komax is generally continuing to follow its tried-and-tested path of providing customers with solutions that maximize their benefits while giving them the best value for money, thanks to the modular design and user-friendliness of our products.

In closing, I would like to warmly thank all those customers who visited us at Productronica. I truly value every opportunity to meet and talk with you in person.
