

Komax presents a Host of Wire Processing Highlights

The wire processing market faces a number of different challenges in the future. Consumers have a growing need for more comfort, safety, quality and environmental friendliness. These same factors are driving growth in many sectors, especially the car industry. Hybrid and electric cars are just one source of stimulation in this regard. The potential for growth in automation and in the electronics and electrical equipment market is correspondingly large.

Components and modules are being miniaturized to an ever greater extent to allow the growing number of functions to be integrated into products. Without automation, it is often no longer possible to achieve an acceptable level of process control.

To ensure that our customers continue meeting the tough requirements in the industry, we at Komax are presenting the following highlights at the Productronica, among others:

- *Kappa – the powerful fourth generation of cut-and-strip machines. This new generation is fitted with new types of sensors, powerful drives and easy-to-operate touch controls. The solutions excel in terms of their much improved flexibility of use and gentle wire processing.*
- *Alpha 356 – the multifunctional fully automatic crimping machine. This model accommodates up to seven processing stations. You can achieve almost any combinations of crimping, seal loading, fluxing/tinning, twisting, fitting with insulating sleeves and end sleeves for strands as well as bulk turned contacts and customerspecific processes.*
- *Alpha 358 – long cable processing with a minimal footprint. Here, long cables can be processed in top quality in minimal space. This approach makes subsequent processing much easier and greatly reduces the danger of damaged contact parts. It also boosts productivity. In a word, the Alpha 358 sets new standards in the processing of long cables.*
- *Zeta 633/651 – unbeatable cost-benefit ratio for one-sided loading. This model underscores Komax's leadership in the component loading business. The new automatic loader is extremely flexible and features integrated quality monitoring units, all at an appealing price.*

It is very important to me to thank all the customers who visit our exhibition stand at the Productronica for taking the time to stop by. The contact and conversations with you are always extremely valuable to us.
