

Alpha 355, 355 S, 356 and 455 now Even More Efficient

Performance boost and greater flexibility for the Alpha product line

Komax constantly strives to boost the performance of its existing products and render them easier to operate and more flexible to use. As part of this continuous improvement process, Komax optimized various parts of the Alpha product line in highly innovative ways and added new functions to them.

Philipp Vontavon Product Manager

Increased productivity

Komax modules are so deeply integrated in the fully automatic machines that the processes can be optimally coordinated with each other. The maximum acceleration rates for the wire drive were also increased. This step increased performance by an average of 10 percent.

Simple check of machine settings

Operators are frequently not certain if the machine settings have been optimally selected. Komax developed a software tool as a simple aid for the customer. With this tool, the operator can access the necessary values quickly and easily to set the machine in the optimum manner.

Greater flexibility in inkjet marking

The new Komax inkjet generation can be operated effectively immediately on the new Alpha generation. Furthermore, the inkjet interface was expanded to accommodate the operation of non-Komax markers as well.

Benefits of the software update

The improvements above are software based, allowing them to be used on the new and the existing Alpha 355, Alpha 355 S, Alpha 356 and Alpha 455.

Alpha 355 S: Ideal supplement to Alpha 355 and Alpha 356

The new Alpha 355 S is a machine positioned between the Alpha 355 and the Alpha 356 in terms of its uses. The Alpha 355 S is based on the Alpha 355 and covers largely the same processes.

However, it now allows non-Komax processing modules to be used. We have a software tool for the quick, optimum integration of these modules. With this tool, our national representatives can integrate the process stations on the machines themselves to cover future applications quickly and flexibly.

High flexibility with Alpha 355 S

YOUR BENEFITS

- Greater production output and user friendliness
- Flexibility in the selection of processing stations
- Flexibility in the selection of the marking system
- A software update is available with all new functions and optimizations.
